The Methodology and Evaluation Research Core Facility (MERC) provides a range of evaluation and data services to meet our clients' diverse needs. We support clients by sharing our expertise in human data collection and analysis, fostering good data practices, providing a professional outside perspective, telling the story or data, and highlighting inequalities and disparities. MERC takes this further by also providing education and training to develop these skills in others.

Overview

This report is an analysis of data from the 2018-2023 administrations of the Year 1 College Behavior Profile (Y1CBP) to entering first-year students at Omaha Collegiate Consortium (OCC). The Y1CBP is a web-based program designed as an alcohol prevention tool for delivery to the general student population. At OCC, it is administered to entering first-year students, and reflects their use and perceptions prior to their time on campus. As a result, Y1CBP data are not valid as a measure of campus-wide drinking. These data are not a substitute for a valid campus-level survey of students for obtaining general alcohol/marijuana use indicators such as the Nebraska Assessment of College Health Behaviors (NACHB), the American College Health Association (ACHA) Survey or Core Institute Survey.

The Y1CBP provides personalized feedback to students based on the input of their own use of alcohol/marijuana and self-reports of harms, as well as their campus norms. At OCC, these campus norms are based on the previous administrations of the Y1CBP and include both behavioral and attitudinal information. As a population-level prevention tool, the Y1CBP contains a feedback track for those students who do not use alcohol/marijuana. Instead of personalized feedback of using alcohol/marijuana, it provides reinforcement for the abstinence choice. Other aspects of educational information and social norms messages are the same.

The results in this report are valid for examining the characteristics related to alcohol/marijuana use of the entering first-year class. This includes the extent to which entering students have misperceptions about student alcohol/marijuana-related behaviors and attitudes at your school. This can be used to help design social norm messages and prevention programming for new students. You can use these data to assess whether the entering first-year students reflect the general alcohol/marijuana use patterns of high school students in your service area or deviate from these in meaningful ways. You can also use Y1CBP data over time to detect changes in the alcohol/marijuana use patterns of your entering students that might suggest need for further prevention and intervention.

Methods

The Y1CBP is completed on a web-based platform hosted by the University of Nebraska – Lincoln. Student response data were analyzed using SPSS V.29. In 2023, the Y1CBP was completed by 1,756 entering first-year students at participating OCC schools, with an average age of 18.41 (1,154 women and 602 men; 210 Greek-affiliated students, 1,546 non-Greek students; 1,396 NE residents, 360 nonresidents).

All drinking behaviors are computed from the daily drinking diary in the Y1CBP. The diary asks students to report their typical drinking for the past month on a one-week calendar by recording the number of drinks and the number of hours drinking each day of the week. The standard definition for binge drinking is having five or more drinks for men and four or more drinks for women in a single setting. Abstainers are determined within the Y1CBP as students who report never drinking or not drinking within the past year. These students receive abstainer feedback.

Drinks per week are calculated from the total number of drinks reported for the week in the one-week diary. The number of days drinking per month is computed by taking the number of days on which drinking is reported in the one-week diary and multiplying by 4.2. Average drinks per occasion are computed by dividing the total number of drinks reported for the week by the number of days on which drinking is indicated.

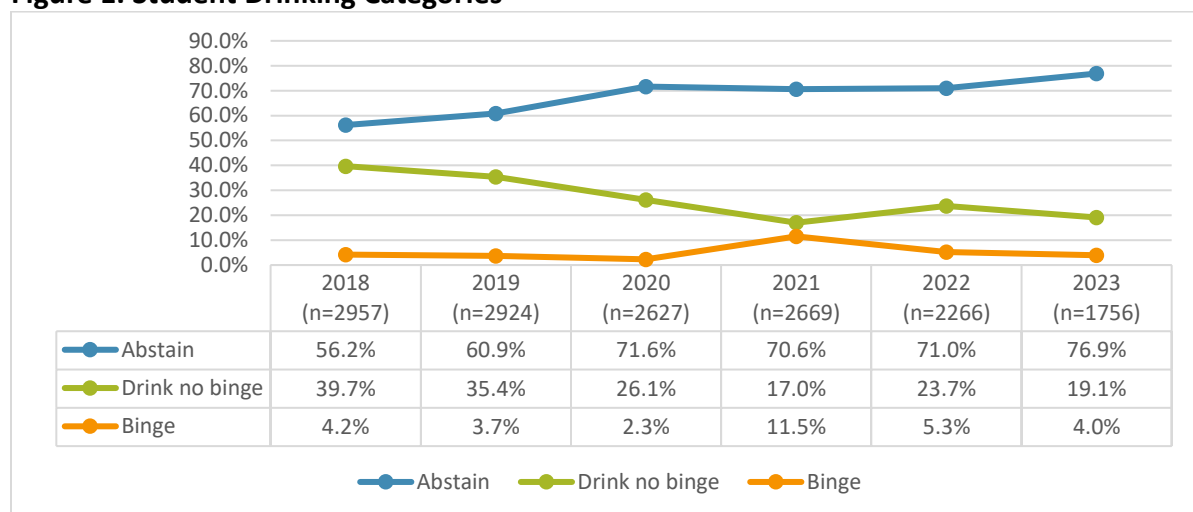

Group differences by student sex, Greek status, and Nebraska residency are shown when those differences are statistically significant. This means that the likelihood that the differences between groups is due to chance is low. Full data by those groups can be found in Appendix B. Where possible, Y1CBP data is also compared to the Nebraska Youth Risk Behavior Survey (YRBS), a national public health surveillance survey of high school students. The YRBS is collected every other year and focuses on students in grades 9-12. The most recent YRBS data available is from 2021.

Student Self-Reported Drinking

Drinking Patterns

Drinking patterns over the past six years are shown in Figure 1. In 2023, more than three-fourths (76.9%) of incoming OCC students (n=1,756) were alcohol abstainers, an increase from 2022's abstinence rate of 71.0%. Binge drinking was reported by 4.0% of students, a slight decrease from 2022 (5.3%) but a large decrease from 2021's 11.5%. The 2023 binge rate was much lower than the 17.5% binge rate of Nebraska high school seniors recorded in the 2021 Youth Risk Behavior Survey (YRBS). Incoming male students were more likely to binge drink as compared to female students in 2023 (5.5% vs. 3.2%). Similarly, non-resident students coming to OCC in 2023 were more likely to drink alcohol (31.4%) and more likely to binge drink (6.4%) in comparison to resident students (21.0% drank alcohol and 3.4% binged). Furthermore, non-Greek students were less likely to drink alcohol (78.8%) and less likely to binge drink (3.4%) as opposed to students who participate in Greek life (62.4% drank and 8.6% binged).

Figure 1. Student Drinking Categories

Students' average drinks per occasion over the past six years are shown in Figure 2. In 2023, incoming OCC students drank one and a half drinks per occasion (n=401 drinkers), slightly less than those in 2022 (1.7) but far less than students in 2021 (3.0). Male OCC students were more likely to average drinking more per occasion (1.9) than female OCC students (1.3). In 2023, students believed that their peers consumed three and a half drinks per occasion compared to

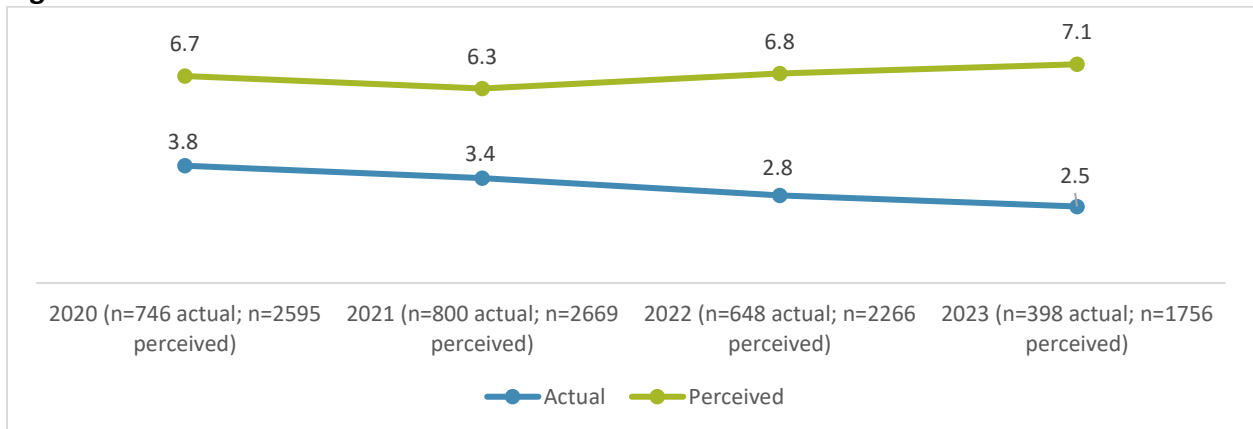

the one and a half actual drinks consumed. Overall, the 2023 perceived drinks per occasion is the lowest number since 2020.

Figure 2. Average Drinks per Occasion

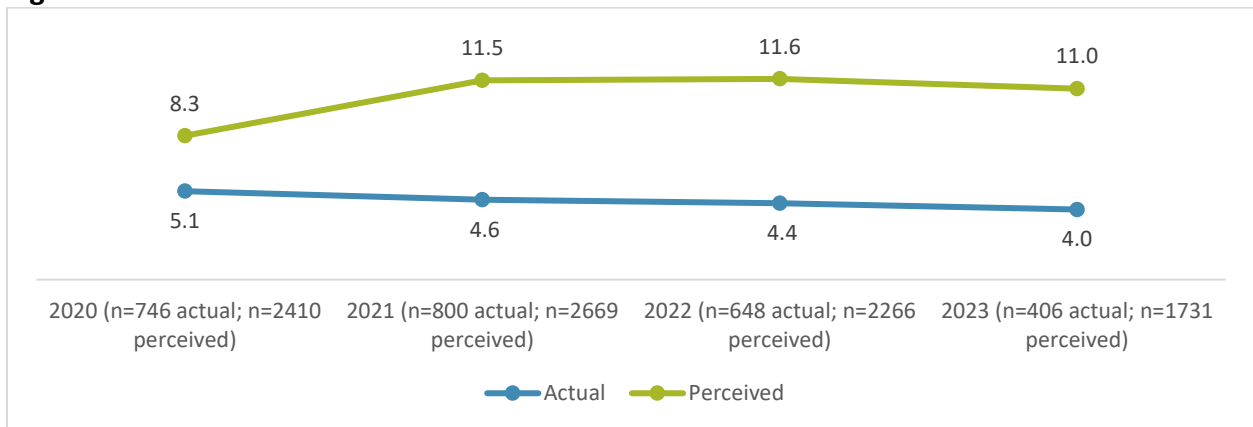

Incoming OCC students who consumed alcohol reported having on average two and a half drinks per week (n=398 drinkers) in 2023, slightly less than those in 2022 (2.8). Male OCC students averaged over than a full drink more consumed per week than female OCC students (3.3 vs. 2.1). Incoming students thought that their peers drank more than seven (7.1) drinks per week in 2023. This was the highest rate in the last four years but remains relatively consistent with rates in prior years (Figure 3). Male students entering OCC thought their peers had more than eight (8.1) drinks per week compared to female students entering OCC (6.6). Greek Students entering OCC perceived their peers to drink eight and a half drinks per week compared to the perceptions of non-Greek life students (6.9). Overall, incoming OCC students think that their peers consume almost three times the amount per week than they actually do.

Figure 3. Drinks Per Week

Finally, OCC entering students in 2023 drank four times per month on average (n=406 drinkers) seen below in Figure 4. This was a slight decrease from the 4.4 times per month students reported in 2022 and the lowest average in the past four years. In 2023, students believed their peers drank an average of eleven times per month, a slight decrease from 11.6 in 2022 but relatively consistent over the past three years. Overall, OCC students believe their peers drink almost three times as often per month than they truly did.

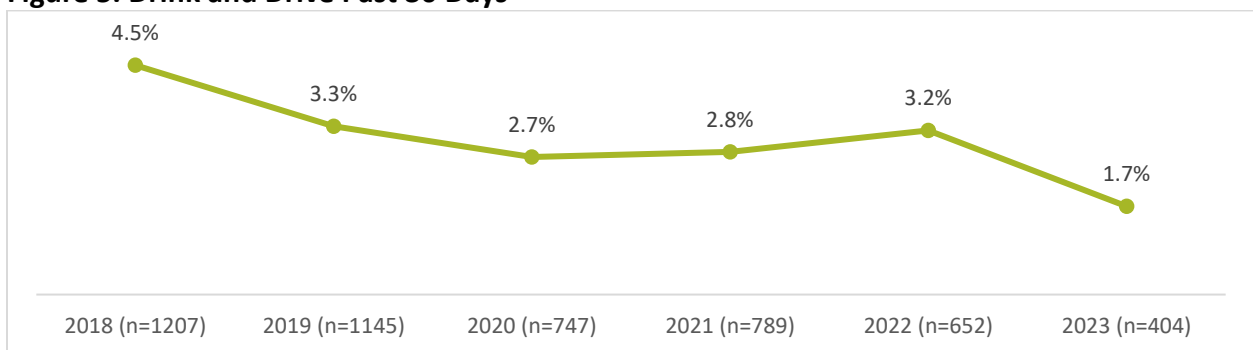

Figure 4. Times Drink Per Month

Drinking Related Harms

In 2023, 1.7% of students entering OCC (n=404 drinkers) drove after drinking alcohol in the past 30 days (Figure 5). This is a decrease from 3.2% in 2022 and the lowest rate in the last six years. The rate for 2023 was much lower than the 7.7% recorded by Nebraska high school seniors on the 2021 YRBS.

Figure 5. Drink and Drive Past 30 Days

Only 2.4% of incoming OCC students (n=1,742) rode with a drunk driver in the past 30 days in 2023, as shown in Figure 6. This was slightly lower than entering OCC students in 2022

(3.9%) and the lowest rate in the last six years. According to the 2021 YRBS, the rate of high school seniors who rode with a drunk driver was 13.9%, more than five times higher than incoming OCC students in 2023. Students entering OCC in 2023 who lived in Nebraska were more likely to ride with a drunk driver as opposed to non-resident students entering OCC (2.8% vs. 0.8%).

Figure 6. Ride with Drunk Driver Past 30 Days

Total Experienced Harms

The Rutgers Alcohol Problem Index (RAPI) is a 23-item self-administered screening tool for assessing drinking-related harms/problems in students. The Y1CBP includes 16 items from the RAPI for an adapted index. Figure 7 shows alcohol using students entering OCC averaged less than two (1.9) problems on the RAPI (n=406 drinkers). This is consistent with the reported 1.8 problems on the RAPI from students in 2022. On average, non-Greek life students were found to report fewer RAPI problems (1.8) than Greek life students (2.5).

Figure 7. Rutgers Alcohol Problem Index (RAPI)

More than one in eight (13%) OCC students who drink (n=406) reported five or more RAPI problems, which is considered a threshold for problematic drinking outcomes (Figure 8). This is consistent with rates from incoming OCC students in both 2022 and 2021. Future OCC students who were involved in Greek life were more likely than non-Greek life OCC students to report five or more RAPI problems (21.5% vs. 11.0%).

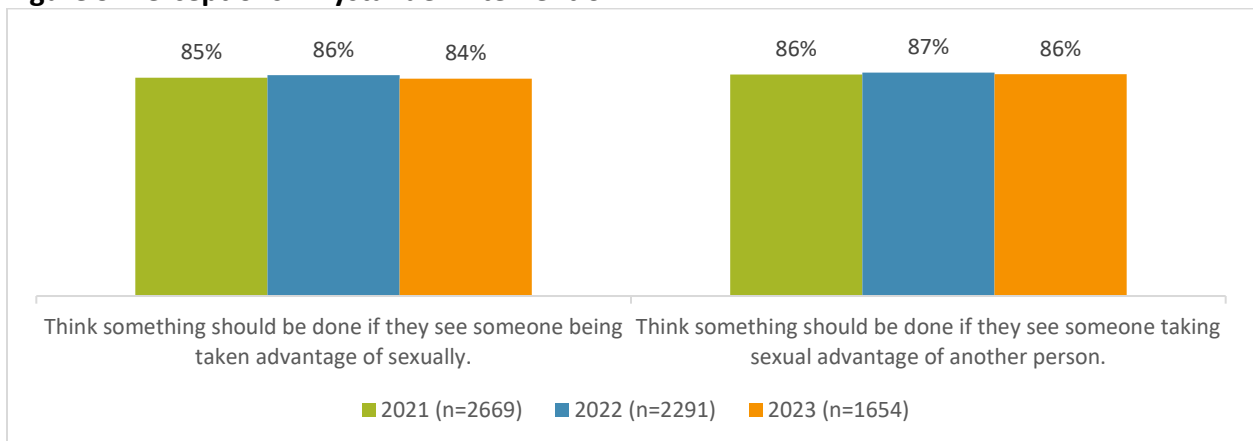

Figure 8. Five or More RAPI Problems

Student Perceptions

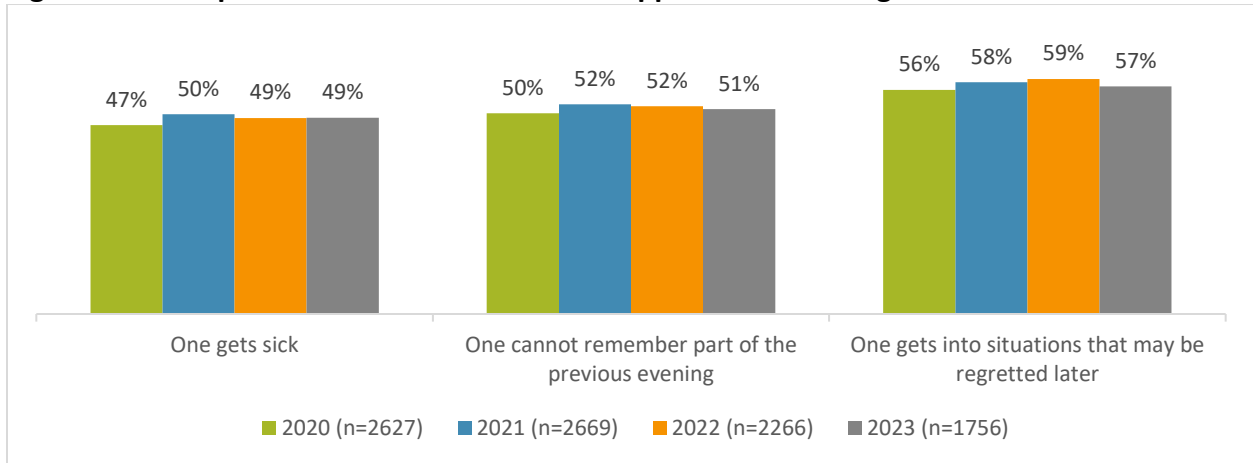

Student perceptions are shown in Figures 9 through 11. More than five out of six (84%) entering students at OCC (n=1,654) believed that something should be done if another person was being taken advantage of sexually while 86% thought something should be done if they see someone taking sexual advantage of someone. These rates are similar to those in both 2022 and 2021 as displayed in Figure 9.

Figure 9. Perceptions – Bystander Intervention

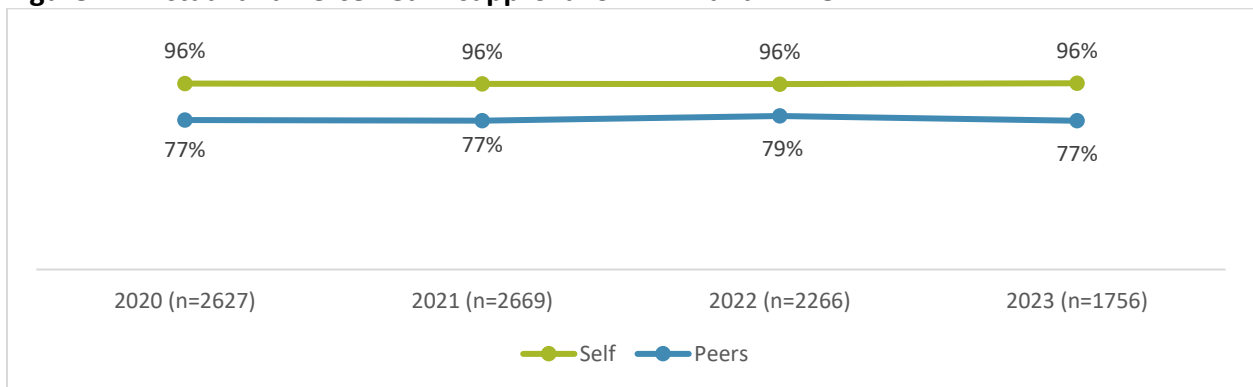

In 2023, nearly half of entering OCC students disapproved of drinking so much one gets sick (49%) or drinking so much that one cannot remember the night before (51%), and 57% of students disapproved of getting into situations that may be regretted later as a result of their drinking. There was little change in the rates of disapproval from incoming OCC students over the past four years (Figure 10).

Figure 10. Perceptions – Reasons for Peers’ Disapproval of Drinking So Much

When looking at attitudes towards drinking and driving, OCC students in 2023 believed more than three out four peers (77%) disapproved of drinking and driving. However, 96% of incoming students disapproved of drinking and driving, a rate relatively consistent over the previous four years.

Figure 11. Actual and Perceived Disapproval of Drink and Drive

Lastly, when entering OCC students were asked to give an agreement or disagreement with the statement “If both people are drunk, it can’t be rape,” 79% said they disagreed in 2023. As displayed in Figure 12, this follows a similar trend since 2021.

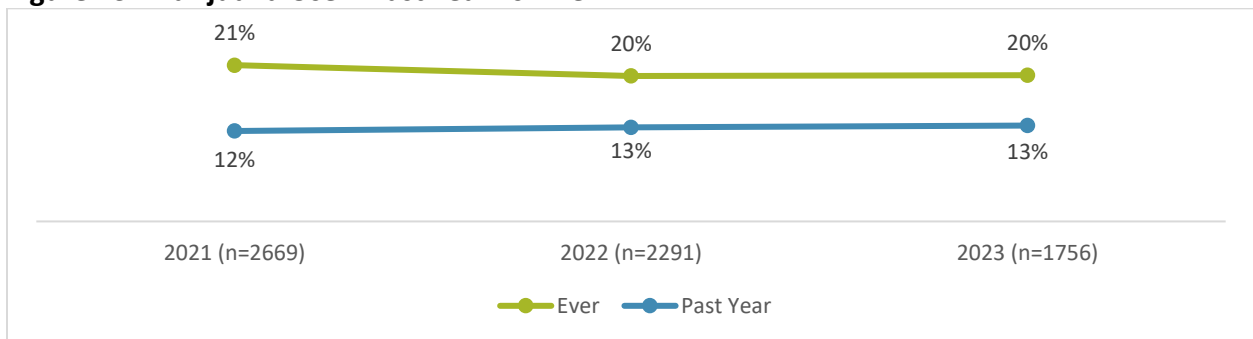

Figure 12. Agreement on the Statement “If both people are drunk, it can’t be rape.”

Student Self-Reported Use of Marijuana

In 2023, 13% of incoming OCC students (n=1,756) reported using marijuana in the past year with 20% reporting having ever used it. These rates are consistent over the past three years as presented in Figure 13. According to the 2021 YRBS, 24.7% Nebraska high school seniors have ever used marijuana, 4% higher than the incoming 2023 OCC students. Greek students entering OCC were both more likely to have used marijuana in the past year more than non-Greek students (21.0% vs 12.0%) and more likely to have ever used it as opposed to non-Greek students in 2023 (28.6% vs 14.5%).

Figure 13. Marijuana Use – Past Year vs. Ever

Students who said they used marijuana in the past year were asked additional questions about frequency of use. More than a quarter (26%) of these students reported using marijuana (undefined) at least one or more times a week in 2023 (n=229), an increase from students in 2022 (20%). Students (n=1,756) perceived two out five of their peers to use marijuana at least once a week, less than the actual rate among entering OCC students. The perceived rate of marijuana use at least once a week in 2023 is the highest in the last three years (Figure 14).

Figure 14. Frequency of Marijuana Use

When looking at frequency of marijuana derivatives use, 11% of marijuana users (n=229) used marijuana derivatives one or more times a week in 2023. This is a slight decrease from the 14% reported in 2022 but much less than students in 2021 (19%). Incoming OCC Students thought 23% of their peers used derivatives one or more times a week in 2023 (n=1,140) which is the highest rate since 2021 but has been relatively consistent among prior OCC students.

Figure 15. Frequency of Marijuana Derivatives Use

According to marijuana using OCC students (n=229), only 1% used marijuana edibles once or more times a week, a decrease from students in 2022 (6%) and 2021 (18%). Incoming

students thought 23% of their peers used marijuana edibles one or more times a week in 2023 (n=1,756). In contrast to actual marijuana edible use per week, the perceived rate of marijuana edible use per week among OCC peers has increased every year since 2021 (Figure 16).

Figure 16. Frequency of Marijuana Edibles Use

Marijuana Related Harms

As shown in Figure 17, 22% of incoming marijuana users (n=229) drove after using marijuana in the past year. This is a decline from students in 2022 where 29% reported this behavior. The reported rate of OCC students who drove after using marijuana in 2023 is the lowest in the past three years.

Figure 17. Drive After Using Marijuana

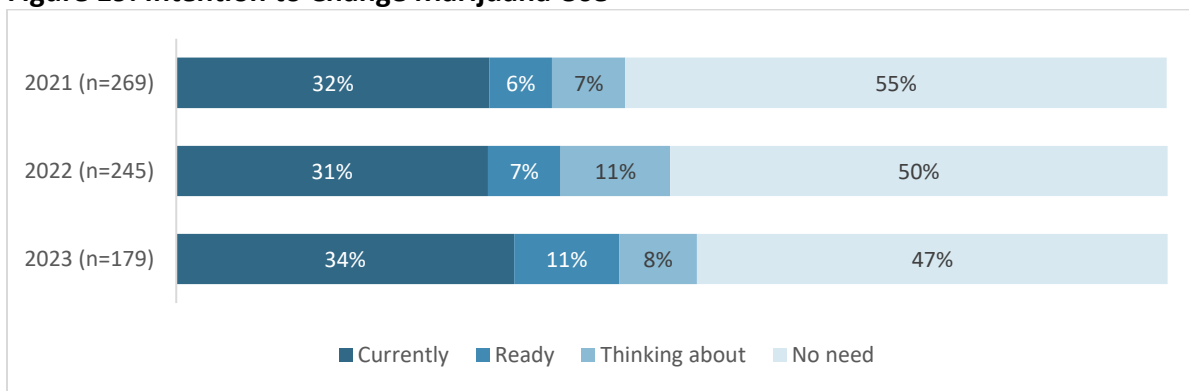

In 2023, 18% of incoming OCC students rode with a driver after the driver used marijuana (n=1,756), a rate that has been consistent since 2021 (Figure 18).

Figure 18. Ride with a Driver After the Driver Used Marijuana

Finally, less than half of marijuana users (47%) reported they had no need to change their use of marijuana (n=136). As seen in Figure 19, more than a third (34%) reported they were currently changing their use, 11% were ready to change their use, and 8% were thinking about changing their use.

Figure 19. Intention to Change Marijuana Use

Summary

Alcohol use among entering first-year students at OCC has shown signs of a decrease to what was reported in 2022. More than three-fourths (76.9%) abstained from alcohol, an increase from 2022 (71.0%). OCC students who were not residents of Nebraska were more likely to have drunk in the past 30 days compared to students who were residents (31.4% vs. 21.0%). Additionally, Greek life students entering OCC in 2023 were more likely to drink alcohol in the past 30 days as opposed to non-Greek life students (37.6% vs. 21.2%). There was a slight decrease in binge drinking from 2022 (5.3%) to students in 2023 (4.0%), both still much lower than reported by Nebraska high-school seniors in the 2021 YRBS (17.5%). Male OCC students

were more likely to binge drink in comparison to female OCC students in 2023 (5.5% vs. 3.2%). Similarly, non-resident students entering OCC were more likely to binge drink compared to resident students (6.4% vs. 3.4%). Furthermore, OCC students involved in Greek life were more likely to binge drink in the last 30 days compared to OCC students not involved in Greek life (8.6% vs. 3.4%).

Incoming students at OCC averaged one and a half drinks per occasion, two and a half drinks per week, and reported drinking four times per month. Male students entering OCC in 2023 drank more per occasion than female students (1.9 vs. 1.3). Furthermore, male students entering OCC in 2023 on average had more drinks per week than female students entering OCC (3.3 vs. 2.1).

The percentage of 2023 incoming students that rode with a driver who drank and drove (1.7%) was the lowest reported rate in the six years. However, it was much more common for students to drive after using marijuana (22%) or ride with a driver who used marijuana (18%). The 22% of marijuana using students who drive after use in 2023 is the lowest rate among incoming OCC students since 2021. In 2023, 2.4% of entering OCC students rode with a driver who drank alcohol in the past 30 days, the lowest rate since 2018. Incoming OCC students who were residents of Nebraska in 2023 were more likely to ride with a driver after the driver drank alcohol compared to non-resident OCC students (2.8% vs 0.8%).

Despite declines in driving under the influence of alcohol, students entering OCC in 2023 reported 1.9 problems on the Rutgers Alcohol Problem Index (RAPI) because of their drinking behaviors, roughly consistent with prior years. Greek life students in 2023 reported more problems (2.5) than non-Greek students (1.8). Meanwhile, the percentage of students that reported experiencing five or more problems this year (13%) was identical to that of students entering OCC in both 2022 and 2021. However, Greek-life students were almost twice as likely than non-Greek life students to report five or more RAPI problems in 2023 (21.5% vs 11.0%).

Overall, 2023 entering students' misperceptions regarding the frequency of alcohol, as well as peer disapproval of alcohol-related behavior, were in line with previous years. Across the board, students perceived higher rates of drinking per occasion, consumption of drinks per

week, and times drinking per month than actual reported values. Male OCC students were more likely to perceive their peers to have more drinks more per week than female OCC students (8.1 vs. 6.6). Similarly, Greek-life students were more likely to have more drinks per week than non-Greek life students (8.5 vs. 6.9). The perceptions regarding the frequency of marijuana consumption were slightly lower than the actual frequency of use among OCC students. These differences imply a need for continuing efforts to address normative perceptions in prevention materials and the importance of Y1CBP as a norms intervention for helping to correct these misperceptions. Social norms marketing/messages in the Y1CBP need to continue to be an important feedback tool to address these.

Appendix A: 2023 Y1CBP Summary Tables

Descriptive Statistics
