FAX: 402-472-8652  
<http://www.necrop.org>**

The Nebraska Crop Improvement Association is a non-profit organization designated by the University of Nebraska Institute of Agriculture and Natural Resources to certify the quality of crop seeds and vegetative plant materials, excluding potatoes, under approved rules and regulations. The general purposes of the association are to conduct all activities related to the certification of crop seeds; to maintain and make available to the public, through certification, high-quality seeds of superior crop varieties so grown and distributed as to ensure genetic identity and genetic purity; to publicize, advertise, and otherwise promote the merits and use of certified seed; and to carry on educational work for improving the agronomic practices and furthering agricultural interests in the state.

**OFFICERS**

Jim Girardin, Broken Bow . . . . . President (State-at-Large)  
Ruben Wehnes, Inland . . . . . Vice President (District 2)  
Conrad Nelson, Wallace . . . . . Treasurer (District 3)

**DIRECTORS**

Eric Nelson, Mead . . . . . District 1  
Leon Kriesel, Gurley . . . . . District 4  
Chris Cullan, Hemingford . . . . . State-at-Large  
Duane Muhlbach, Ravenna . . . . . State-at-Large  
Mike Fritz, Murdock . . . . . Seed Trade Representative  
Martha Mamo, Lincoln . . . . . Agronomy Representative  
Michael Boehm, Lincoln . . . . . IANR-UNL Representative

**STAFF**

Steve Pageler . . . . . Certification Manager  
Diane Brestel . . . . . Administrative Assistant  
Lynn Robinson . . . . . Lab Services Supervisor  
Cody Harris . . . . . Field Services Supervisor

The purpose of this directory is to provide crop producers, decision makers, and the seed industry with a reference to certified seed sources in Nebraska.

Agronomic or disease rating information has been adapted from information made available by the variety owner. For the most accurate information please contact the variety owner or your seed supplier.

This seed book includes those members whose fields were planted with eligible seed stocks and whose applications for field inspection were received by the publication date.

Inquiries about seed supplies and prices should be directed to the growers and/or seed enterprises listed, not to the Nebraska Crop Improvement Association.

In no case is the seed listed in this seed book yet **CERTIFIED**, for it must be conditioned, tested in the laboratory, and labeled with the official certification tag or bulk sale certificate before it can be offered for sale as Certified Seed.

Seed producers, conditioners, and distributors voluntarily use the seed certification process to assure their customers that extra care has been taken to provide them with correctly identified, genetically pure seed. The **CERTIFIED SEED** label identifies seed meeting quality requirements and assures the buyer of obtaining reliable performance of the variety named on the label.

Each member is responsible for handling certifiable seed so that it will meet the Nebraska Seed Certification Standards. The Nebraska Seed Law requires each container to be labeled with its origin, germination percentage and test date, percentage by weight of pure seed, other crop seed, weed seed, and inert matter. By purchasing seed labeled as **CERTIFIED SEED**, a buyer can be assured of its quality. If certified seed is purchased in bulk, each sale is accompanied by an official Bulk Sales Certificate, which includes the same information as a label.

Orders for Certified seed may be accepted by the listed growers, approved conditioners, and authorized distributors only with the understanding that they will be filled if and when **ALL** the certification requirements are completed.

**PLANT VARIETY PROTECTION ACT  
HOW IT BENEFITS YOU!**

- Any varieties listed in this publication under the Plant Variety Protection Act will be marked with the **PVP** logo.
- It takes up to ten years to develop a new variety. PVP encourages plant breeding research to produce even better varieties for tomorrow. Without PVP, plant breeders could not afford to invest capital into new varieties and would not be interested in breeding improved varieties.
- Most protected varieties can only be sold as certified seed. This helps ensure that the seed buyer gets the variety exactly as the breeder intended it to be.
- The use of certified seed allows the varieties you've chosen to make the most of the growing environment.
- The Department of Agriculture is responsible for enforcement of Plant Variety Protection violations in Nebraska. Private seed companies are authorized to take appropriate legal action. Contact the Department of Agriculture (402-471-2394) for more information about your rights and responsibilities with PVP varieties.

**Notice to Buyer: Exclusion of Warranties and Limitations of Damages**

Seed bearing authorized Nebraska Certified Seed labels have met the minimum requirements outlined in the current edition of the Nebraska Seed Certification Standards. The seed certification process relies upon samples and records provided by members which are beyond the control of the certifying agency. Therefore, the Nebraska Crop Improvement Association makes no warranties, expressed or implied, including warranties of merchantability or fitness for a particular purpose concerning certified seed and hereby expressly disclaims the same. In no event shall the Nebraska Crop Improvement Association be responsible for damages, whether actual, incidental, or consequential, regarding certified seed provided by applicants/members and/or vendors. However, complaints addressed to the Nebraska Crop Improvement Association will be investigated.

1 U.S. Plant Variety Protection: N = not protected, A94 = PVP applied for, P94 = Applied for or protected under revised PVP Act of 1994.  
 2 These comparative ratings are based on each variety's average performance within its area of adaptation under normal Nebraska growing conditions and cultural practices. Plant performance will be influenced by soil, weather, pests, and other production conditions.  
 3 R=resistant; S=susceptible; MR=moderately resistant; MS=moderately susceptible; MT=moderately tolerant; T=tolerant. The reaction may vary depending on disease or development, management practices, and/or plant growth stage or deviations in genetic resistance within the variety.  
 4 A rank of medium means 15 to 16% grain protein content is typical.

**Agronomic or disease ratings have been adapted from information made available by the variety owner. For the most accurate information please contact the variety owner or your seed supplier.**

## HARD RED WINTER WHEAT

**PVP AP18 AX** - AP18 AX is a medium maturity Aggressor herbicide tolerant line with excellent yield potential. It has strong disease tolerance to wheat streak mosaic virus, leaf rust, and stripe rust. These traits, in addition to its winter hardiness, shatter resistance, and very good test weight, makes AP18 AX a great fit across the plains. U.S. Protected Variety(PVPA 1994). AP18 AX can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Red Willow	Peters Seed Farms Inc.*	McCook	308-340-6834		

**PVP AP24 AX** - AP24 AX is a medium maturity, Aggressor AX herbicide-tolerant line from Syngenta Crop Protection AG. AP24 AX has intermediate tolerance to soilborne mosaic virus and low pH soils. It has good winter hardiness and test weight. It is adapted for use across the plains. Protected by U.S. Patent #9,578,880, #10,370,678 and #11,130,962. U.S. Plant Variety Protection Applied For (PVPA 1994). AP24 AX can only be sold as a class of certified seed.

**PVP SY 517 CL2** - SY 517 CL2 is a two gene Clearfield wheat. As a two gene variety, SY 517 CL2 has a strong herbicide tolerance for the Beyond herbicide and MSO to control unwanted cheat, goatgrass, feral rye, and other weeds. It is medium maturity variety with excellent test weight, good straw strength and good winter hardiness. SY 517 CL2 is moderately tolerant to fusarium head blight, stem and leaf rust and resistant to Soil-Born Mosaic virus. U.S. Protected Variety (PVPA 1994). SY 517 CL2 can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Furnas	PSI Applications	Cambridge	308-695-6454		

**PVP AMPLIFY SF** - Amplify SF hard red winter wheat developed by Colorado State University. It is a line selection from the cross Bearpaw/Antero//Antero. Amplify SF is a semi-solid stemmed variety for partial resistance to the wheat stem sawfly. Amplify SF was tested throughout the U.S. hard winter wheat region and has excellent adaptation to areas where the presence of wheat stem sawfly is a significant concern. U.S. Protected Variety (PVPA 1994). Amplify SF can be sold as a class of certified seed.

**PVP LCS ATOMIC AX** - LCS Atomic AX is a hard red winter wheat CoAXium® variety. It is an early maturing variety with a short plant type and is a few days earlier than LCS Helix AX. LCS Atomic AX is known for how well it handles heat and drought conditions. This variety has quick emergence and has a strong disease package. LCS Atomic AX is resistant to Aggressor® brand herbicides, making it an excellent tool to clean up fields with Bromus species, feral rye, cereal rye, jointed goatgrass, wild oats and volunteer cereals. U.S. Protected Variety (PVPA 1994). LCS Atomic AX can only be sold as a class of certified seed.

**PVP AP BALDY** - AP Baldy is a hard red winter wheat developed by Syngenta Crop Protection AG. It was selected for height, maturity, green leaf duration, and disease reaction. AP Baldy is moderately susceptible to common stripe rust races but shows tolerant to moderately tolerant reactions to Barley Yellow Dwarf Virus in the Central Plains. U.S. Plant Variety Protection Applied For (PVPA 1994). AP Baldy can only be sold as a class of certified seed.

**PVP CANVAS** - Canvas is a Denali/Antero//Byrd cross providing strong dryland and leading high moisture performance in agronomics and yield. Stripe and stem rust resistance is excellent with good resistance to WSMV & SBMV. Canvas maintains excellent test weight and makes protein very well. End-use quality is very good. Canvas stands well under high fertility and moisture, making it a good candidate for intensive management. U.S. Protected Variety (PVPA 1994). Canvas can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cheyenne	Rushman Seeds*	Gurley	308-249-1384		

**PVP COWBOY** - Cowboy is an awned, white-glumed, hard red winter wheat that has been jointly released by the Colorado Agricultural Experiment Station, the University of Wyoming Agricultural Experiment Station and the CRFW. Cowboy is medium in height and coleoptile length with fair straw strength and has adequate winter hardiness for the central and southern Great Plains area. Cowboy has resistance to stripe rust and moderate resistant to US races of stem rust. Cowboy is also resistant to Hessian fly. Cowboy is susceptible to leaf rust and (Ug99) stem rust. U.S. Protected Variety (PVPA 1994). Cowboy can only be sold as a class of certified seed

**FWF FORAGE FX 1001** - Forage FX 1001 was developed by Montana State University. It is a nearly awnless variety bred for forage production. It is taller and matures earlier than Trical® 102 and Willow Creek. Forage FX 1001 is typically over one inch taller and three days earlier to head than Trical® 102 and 20 centimeters taller and heads an average of ten days earlier than Willow Creek. It was screened for winter hardiness and consistently produces forage and seed yields comparable to or exceeding Trical® 102 in dryland and irrigated trials. U.S. Protected Variety (PVPA 1994). Forage FX 1001 can only be sold as a class of certified seed.

**NE96T441** - NE96T441 is a forage cultivar developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. It was selected from the cross Trical/OAC-85-21/NE88T442. It is an awned, white-glumed cultivar whose primary use will be as an annual forage crop. It is late in maturity, about 6 days later than Presto, and 1 day earlier than Trical 100. The winter hardiness would be considered as good, similar to Trical 100 which is one of the most winter hardy triticale cultivars. It is moderately resistant to the currently prevalent races of stem rust and leaf rust. NE96T441 is moderately resistant to wheat streak mosaic virus.

**THE NEBRASKA CROP IMPROVEMENT  
ASSOCIATION SEED LAB IS THE ONLY OFFICIAL  
SEED LAB IN NEBRASKA AND IS A MEMBER OF  
AOSA AND SCST.**

The seed lab is open to the public and has provided quality testing for all kinds of seed including agricultural crops, native & turf grasses, vegetables and flower seed for over 30 years. All seed is tested according to AOSA rules. Check out [www.necrop.org](http://www.necrop.org) for more information.

## MILLET

**DAWN PROSO** - Dawn was developed at the Panhandle Center of the University of Nebraska. Dawn is a short millet with a tight panicle, about 4 to 5 days earlier to harvest than Panhandle. It ripens uniformly and is more resistant to shattering and lodging than Panhandle. Dawn has a large white seed, and the seed is similar in appearance to Panhandle. Dawn is adapted anywhere proso millet is grown. It may be direct-harvested rather than swathed because of its short stature and early maturity.

## TURFGRASSES

**Buffalograss** is a long-lived, sod-forming, native warm-season perennial grass which reproduces by seed and spreads vegetatively by stolons. It is very suitable for use under low to medium maintenance as an ecologically sound and energy efficient turf. It may be established by seed, plugs, or sod. Even without mowing, plants are very short height (6-8 inches). Buffalograss begins growth in mid to late May and begins to go dormant with the first frost. It has a light green color and fine textured leaves. It grows best in full sunlight and is adapted to a wide range of soil types. It has a higher resistance to drought stress than cool-season turfgrasses.

**CODY** - Cody is a widely adapted, versatile turfgrass variety. It has low-growing plants which green up earlier in the spring and have a darker green color than most other buffalograss cultivars. It has a medium green color with excellent density and texture qualities. Once established and properly managed, Cody maintains a high quality turf throughout the summer. Excellent vigor and a good spread rate help it establish quickly. Cody was developed cooperatively by the members of the Native Turfgrass Group and the Nebraska Agricultural Research Division. Seed of Cody is produced and marketed exclusively under the direction of the Native Turfgrass Group.

## PERENNIAL FORAGE GRASSES

**Big Bluestem** is a native warm-season, sod-forming grass which grows rapidly from mid-spring to early fall. Plants are tall (6+ ft) and robust. It is highly palatable even after maturity and is a high producer of nutritious forage and hay. Big bluestem is adapted statewide for range seedling on subirrigated sites and for irrigated pasture in mixed or pure stands. In eastern Nebraska, it is adapted on silty and clay sites.

**PVP BONANZA** - Bonanza is a synthetic variety developed by three generations of breeding for improved forage yield and forage digestibility. It produces good forage yields with high digestibility that results in improved animal gains when utilized by beef cattle in well managed grazing systems. Bonanza is earlier in maturity than Kaw, similar in maturity to Pawnee, and later in maturity than Rountree. U.S. Protected Variety (PVPA 1994). Bonanza can only be sold as certified seed.

Custer	Arrow Seed Company	Broken Bow	308-872-6826		53
Nance	Michaela Wetovick	Fullerton	308-536-5428		18

**Little Bluestem** is a native, warm-season bunchgrass which grows rapidly from mid June to early August. Plants are medium height (3+ feet) and well tillered. It has good forage value when leaves are tender and succulent, but palatability is only moderate for fall grazing. Little bluestem is adapted statewide for use in warm-season mixtures and pure stands on most soils and sites. It is not as drought tolerant as blue grama.

**CAMPER** - Camper is a synthetic variety produced by crossing two unrelated strains developed from original prairie sources by the USDA-ARS and Nebraska. It is a moderately late maturing grass, similar in maturity to Pawnee big bluestem. The combination of earlier maturity and diverse parentage provides wide adaptation.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	Stock Seed Farm	Murdock	800-759-1520		51

**Bromegrass** is an introduced cool-season, sod-forming grass which produces abundant forage in the spring and late summer for hay and pasture. It is widely adapted to eastern and central Nebraska and responds to intensive management practices. It is an early maturing grass and has moderate tolerance to drought and grazing.

**PVP CACHE** - Cache is recommended for use on irrigated and semi-irrigated pastures for forage production. It has increased forage yield, total seed yield, and seedling emergence. It produces significantly more dry matter forage than cultivars Regar and Fleet. Under limited irrigation, Cache meadow bromegrass produced significantly more dry matter than the cultivars Fleet and Regar. Cache is similar to Regar in establishment and persistence but significantly better than Fleet. U.S. Protected Variety (PVPA 1994). Cache can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826	41	

**Sideoats Grama** is a native warm-season, mildly sod-forming grass which grows rapidly in late spring and may stay green into late summer. Plants are medium height (3+ feet) and well tillered. Forage value and hay quality are good but low in yield. Drought tolerance is good. Sideoats grama is well adapted for use in native grass mixtures throughout Nebraska.

**BUTTE** - Butte is a variety selected by the USDA-ARS and Nebraska for superior seedling vigor and establishment from native Nebraska ecotypes. It is a medium (mid-summer) maturity grass, somewhat earlier than Trailway. It is widely adapted, especially for those areas with relatively short growing seasons.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826		34

**Indiangrass** is a native warm-season, sod-forming species which provides palatable forage and hay, nearly equal to big bluestem in quality. Plants are 6+ feet and robust. It is well adapted throughout Nebraska for most soils and sites, for use in range or pasture seedings in pure stands, and in mixtures with other tall warm-season grasses.

**CHIEF** - Chief was developed for improved yield and forage digestibility by USDA-ARS and the University of Nebraska for use in the central Great Plains and Midwest. Chief is adapted to HZ 4 and the upper half of HZ 5. It produces significantly greater forage yields than other available HZ 4 cultivars. It represents the second generation of indiagrass cultivars developed for use in production agriculture. It can be used in pure stands or multispecies mixtures with other grasses.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826		20

**NEBRASKA 54** - Nebraska 54 was selected from native ecotypes collected in Jefferson county by Harold Hummel and released by Nebraska. It is a late maturing grass and is a few days earlier than Oto. Nebraska 54 is typical of central plains ecotypes.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	Stock Seed Farm	Murdock	800-759-1520		10

**Switchgrass** is a native warm-season, sod-forming grass which grows rapidly in late spring and early summer. On adapted sites, it has high yield of good quality hay and forage if cut or grazed early. On fall and winter range, palatability is low. Plants are moderately tall, very well tillered, and robust. It is well adapted for use throughout the Great Plains for conservation plantings or in warm-season pastures. Most cultivars are susceptible to stem rust. In some years forage quality and seed yield may be affected.

**BLACKWELL** - Blackwell is a warm-season, native, perennial species that is widely adapted. It is ranked high in leafiness, total forage, and resistance to rust and other diseases. It also possesses excellent seedling vigor when compared to other accessions. Blackwell was cooperatively released as a cultivar by SCS and the Kansas AES in 1944.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	Stock Seed Farm	Murdock	800-759-1520		26

**Intermediate Wheatgrass** is a moderately late maturing, cool-season, sod-forming grass that produces excellent quality forage for hay or grazing in the late spring, early summer and fall. It is well adapted to all Major Land Resource Areas in Nebraska. Intermediate wheatgrass is more drought tolerant than smooth brome but less tolerant than crested wheatgrass. Plants are medium height (4+ feet), well tillered, and robust.

**PVP BEEFMAKER** - Beefmaker is an excellent grass for grazing. The in vitro dry matter digestibility (IVDMD) rating is 1-2 percentage points higher than other released wheatgrasses. Plant height 42.5 inches. The head length is 9.9 inches, and head width is 3.7. The flag leaf is located approximately 30.9 inches from the ground. It was developed by USDA-ARS and the University of Nebraska. U.S. Protected Variety (PVPA 1994). Beefmaker can only be sold as a class of certified seed.

## APPROVED SEED CONDITIONERS

An active APPROVED SEED CONDITIONER system is very important and an integral part of Nebraska's certification program. Approved Conditioners are seed cleaning firms who are authorized by the Board of Directors to purchase field-approved seed and move it to their plants for conditioning, submit samples for testing, order tags or certificates, and merchandise the finished product on a retail basis.

The objectives of the Approved Conditioner program are:

1. To expand the marketing options of seed producers who may not have adequate cleaning or merchandising facilities.
2. To provide the retail seed trade with reliable high quality sources of seed.
3. To improve the quality of seed available, while insuring maintenance of varietal purity.
4. To promote acceptance and use of Nebraska Certified Seed.

## CUSTOM CERTIFIED CONDITIONERS

The role of the Custom Certified Conditioner is to offer seed cleaning and handling services, which are essential for preparing seed sourced from inspected acres for distribution through marketing channels.

Seed conditioners within this category undergo facility inspections conducted by the Association to guarantee quality assurance for both seed producers and consumers.

The objectives of the Custom Certified Conditioner program are:

1. To provide necessary conditioning services for seed producers and merchandisers who do not have adequate cleaning facilities.
2. To improve the quality of seed available while insuring maintenance of varietal purity.
3. To promote acceptance and use of Nebraska Certified Seed.

**NOTE: Some firms listed as Approved Seed Conditioners also provide custom seed cleaning services.**

## 2024 NCIA MEMBERS

Grower (GR) – A member who applies for field inspection services and used the services of either Custom or Approved Conditioners to prepare seed for marketing channels.

Grower-Conditioner (GC) – A member who applies for field inspection services and has adequate facilities for conditioning his own seed produced from inspected acres in preparation for marketing channels.

Custom Certified Conditioner (CC) – A member who may or may not apply for field inspection services and has adequate facilities for conditioning seed produced from inspected acres (by himself or other members) in preparation for sale in marketing channels.

Approved Seed Conditioner (AC) – A member who may or may not apply for field inspection services, has adequate facilities for conditioning seed, and may purchase bulk uncleaned seed from inspected acres of a crop grown by another member for conditioning, tagging, and sale in marketing channels as a class of certified seed.

Retail Facility (RF) – A member who purchases certified seed from another member for the purpose of retailing the seed. If the seed is sold in bulk the facility must have adequate facilities to maintain the genetic purity of the seed.

Associate Member (AM) – Any other person, partnership, or corporation who would not be involved directly in the production, conditioning, or marketing of seed but is interested in furthering the goals of the Association may become a non-voting member.
